

SQL Practice Set

1. **Database Creation:** Create a database
2. **Table Setup:**
 - Create a **Customers** table with appropriate data types and a Primary Key. Insert the data provided in Table 1.
 - Create an **Orders** table with a Primary Key and a Foreign Key referencing the Customers table. Insert the data provided in Table 2.

Data Requirements

CustomerID	Name	Email	City
1	Alice Johnson	alice@example.com	New York
2	Bob Smith	bob@example.com	Los Angeles
3	Charlie Brown	charlie@example.com	Chicago
4	David Wilson	david@example.com	Houston
5	Emma Davis	emma@example.com	Phoenix

OrderID	CustomerID	OrderDate	Amount
101	1	10-01-2024	150
102	2	15-02-2024	200.5
103	3	20-02-2024	320.75
104	1	05-03-2024	180
105	4	10-03-2024	500
106	5	15-03-2024	275.25
107	2	18-03-2024	100

Questions to Solve

1. Retrieve all customers who live in 'New York'.
2. Find the total number of orders placed by each customer.
3. Calculate the total amount spent by each customer.

4. Retrieve the details of orders placed in February 2024.
5. Find the highest order amount and the corresponding customer.
6. List customers who have placed more than one order.
